RESEARCH INTERESTS

My research focuses on human mobility and migration, spatial inequality, geographic data science and climate sustainability. I use digital trace data and computational methods to study the causes and impacts of population movements, particularly during climate hazards, health emergencies and conflict. My work also examines how urban form shapes mobility and exposure to climate risks. I develop methods that make rapidly collected data more useful for population research, official statistics and policy. I lead the Geographic Data Science Lab and am Co-Deputy Director of the MRC Social Health Hub.
